

Ciarán Kearney

Project Engineer

Project Engineer specialising in industrial automation and systems integration, with experience delivering projects for pharmaceutical and manufacturing clients. Skilled in machine vision, print-and-apply systems, PLC programming, FAT/SAT and commissioning.

Previously a Senior Acoustic Consultant, delivering technical assessments and projects for major industrial, energy and commercial developments.

Education

Bachelor of Engineering (Hons) (Mechanical)

NUI Galway

Proficiencies

- TIA Portal
- Cognex Vision Suite, Explorer, Dataman
- Datalogic DL.CODE & Visiset
- CAD software (AutoCAD, Creo, Solidworks, Onshape)
- C#, VBA scripts, ZPL, Matlab, LaTeX, SCL
- Acoustic Software (SoundPLAN, Odeon, Insul, Noise Tools, NaW)
- Unity, Blender
- Label Design Software (Loftware, Bartender)
- Microsoft Office

Professional Experience

2024 - 2026

Project Engineer

AIS Vision Automation

Develop and integrate bespoke automation systems for pharmaceutical and manufacturing applications, working across mechanical, electrical, controls and vision engineering. Responsible for system integration, testing, troubleshooting and commissioning, with regular involvement in customer requirements, supplier coordination and on-site implementation.

2021 - 2024

Senior Acoustic Consultant

Allegro Acoustics

Delivered acoustic engineering projects across industrial, pharmaceutical, energy and commercial developments. Carried out site surveys, data analysis, acoustic modelling and assessments, followed by technical reporting. Developed noise control and mitigation strategies and supported clients and design teams with technical advice throughout project development.

2020

General Operative

Wright Concrete Products

2019

Student Engineer

Thermo King Galway

Key Automation Projects

Semi-Automatic Vial Labeller & Semi-Automatic Square Bottle Labeller

Developed and commissioned two labelling systems for pharmaceutical production.

- Completed the electrical build.
- Integrated all devices (CAB IXOR labeller, Domino TTO printer, Cognex and Keyence vision systems, sensors for vial positioning, label presence verification and double-application prevention).
- Developed the Siemens PLC and HMI programs, including machine sequencing, communications, recipe management, audit trail, alarms, fault handling and operator controls.
- Carried out testing, debugging, fault finding.
- Developed and executed FAT/SAT documentation.
- Produced operating manuals and technical documentation for customer handover.

Products

- Siemens PLCs
- Panasonic PLCs
- Herma/Altech Applicators
- Cognex Cameras/Scanners
- Datalogic Cameras/Scanners
- Zebra Printers/Print Engines
- TTO printers (Zodiac/ICE, Domino, Videojet)
- Omron Cobots
- Omron Vision Systems
- Keyence Cameras/Sensors

Certificates

In-Sight Vision Suite

Spreadsheet Advanced

(Cognex)

Technical Report Writing

(Engineers Ireland)#

Safe Pass

(SOLAS)

Outside Work

Event Planning

Regularly organise group trips across Ireland and Europe.

Community

Previously involved with Let's Get Social Dublin. Organised day trips and facilitated Meetup events.

Available on request.

Automation Projects

Viatrix Line 3

Delivered a complete automated solution for vial labelling and inspection.

- Installed and aligned the printer, vision inspection, wrap-around labeller, presence check sensor, and reject station.
- Programmed the vision system.
- Oversaw integration into existing manufacturing environment with minimal disruption.
- Completed validation protocols and reports.

Almac Syringe Labeller

Installed and commissioned a semi-automatic syringe labelling system for Almac Clinical Services.

- Completed the mechanical setup, machine installation and onsite setup of the labelling system.
- Supported the FAT at HERMA UK, testing machine operation against the User Requirements Specification (URS) and ensuring the agreed requirements were satisfied.
- Completed the required validation documentation and FAT/SAT activities.
- Provided onsite customer support, troubleshooting issues and ensuring reliable machine operation through commissioning and handover.

Following the successful delivery of the initial system, the customer placed orders for two additional systems.

Stryker Cobot Cell

Developed and demonstrated a proof-of-concept robotic packaging and inspection cell for Stryker.

- Configured and created programs for the vision inspection system for 100% inspection, including barcodes, OCR, and blemish detection.
- Set up the communications between the vision system, printer and PLC.
- Supported mechanical setup, system testing and debugging, refining the process through development.
- Successfully demonstrated the concept, which subsequently progressed to a full-scale production automation project.

BSCI Print, Inspect, Apply System

Delivered a a print, inspect and apply labelling system for BSCI.

- Completed the mechanical installation of all parts including the design/fabrication of mounting brackets for the inspection system.
- Set up and commissioned the printer and label applicator.
- Configured the Omron V275 vision system, including creating inspection templates, wiring I/O signals and communications.
- Integrated and tested the printer, applicator, vision system.
- Completed onsite commissioning, troubleshooting and system optimisation.

Acoustic Projects

Irish Life Block 3

Provided acoustic design and assessments for the redevelopment of Irish Life's Block 3 offices on Abbey Street, Dublin.

- Developed acoustic solutions for room acoustics, sound insulation, speech intelligibility and M&E noise across offices, meeting rooms and shared spaces.
- Assessed the environmental noise impact of the development, including its effect on surrounding properties, to support compliance with planning conditions and environmental noise requirements.
- Produced acoustic specifications, calculations and design advice for façades, partitions, floors, doors, ceilings and finishes.
- Supported the project through detailed design, construction, site inspections and acoustic testing.

Grange Power Station

Provided acoustic design and assessment for the 111 MW dual-fuel Grange Power Station at Grange Castle, Dublin.

- Assessed operational environmental noise from the generating plant, including the six engines and associated plant.
- Developed SoundPLAN noise models to predict noise levels and assess compliance with planning conditions and environmental noise requirements.
- Developed acoustic requirements for silencers, acoustic louvers, enclosures and other noise-control measures.
- Reviewed supplier submissions and supported the project through detailed design and construction, ensuring acoustic performance requirements were maintained.
